GEO TOOL

Exploring the Layout of the Geo Tool

The Geo Tool allows you to create medallion or mandala graphics by repeating elements around a shape. To open the Geo Tool, click the  button in the Design Bar or go to Window > DesignPro > Geo.

Using the Geo Tool

To start using the Geo Tool, create a new AI document and open the Geo Tool by going to Window > DesignPro > Geo or by clicking the  button on the Design Bar. In the Geo window, choose either a square or circle shape. Specify a quantity of sections within your shape and how many inches you want the shape to be.

Press the  button and your shape will be created on the page.

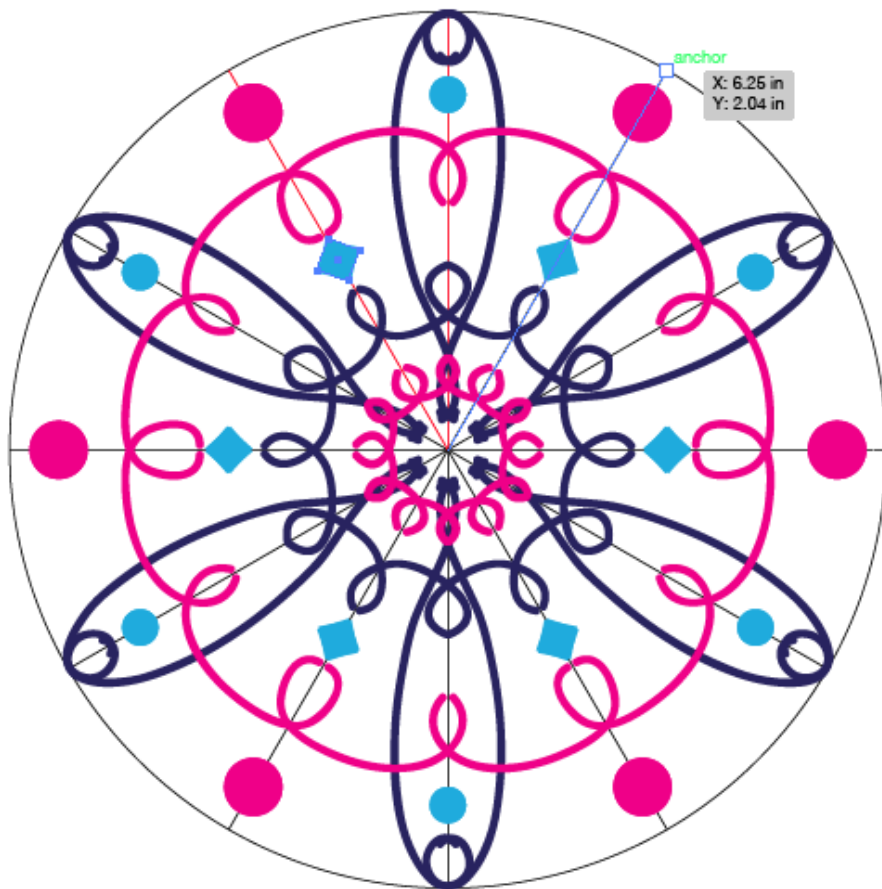

Next, press the  button. This will change the outlines of one of the sections to red. The red area is the active repeat area. Anything drawn in this sector will repeat throughout the shape.

You can use any of the drawing tools to draw inside the Geo shape. Start drawing inside the red lines. The artwork will automatically populate in the other sectors.

Continue drawing between the lines with other colors and other drawing tools to add to your design.

Aside from using the drawing tools you can also use the shape tools to add to your design.

Finally, you can also add symbols from the Symbols Library to add to your design.

When you are finished with your design, click the  button to deactivate the repeat function of the Geo shape.

Select the Geo shape and delete it. The design will now be released and elements can be adjusted individually.

You must click the STOP button before you save your progress in this file. STOP and then SAVE.
