WEAVE

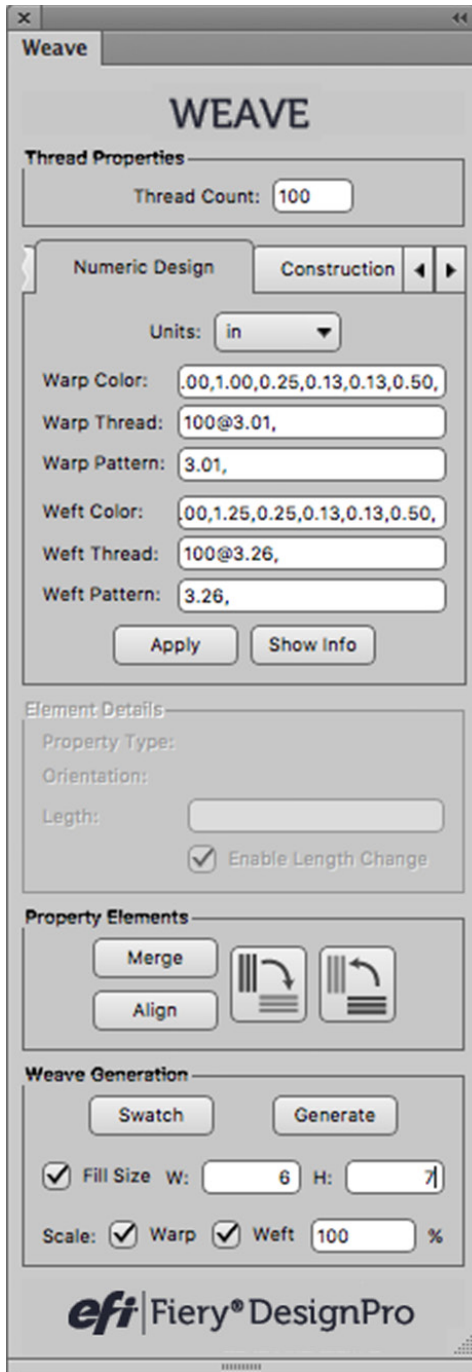

# Using the Fill Size

Every time you have generated your weave design so far, the size of the design is only displayed by the width and height of the repeat. If you would like to fill the rest of your artboard and expand the area of your design beyond the repeat, look in the Fill Size area of the Weave Tool Window.

Check the Use Fill Size check box. The fields for Width and Height will activate and the size of your repeat will be listed in each field. Next, type in the expanded width you would like for your weave design to be displayed at. Press the ENTER key and you should see your design expand to that new width. Type in the expanded height you would like to apply to your design and press the ENTER key. The units will follow the current document units of this file.

You're all set to print or make color ways of your design. If you'd like to make colorways next, see our manual for the Colorist Tool and learn how to easily make multiple colorways that are all stored within one file.
